

Classes

Cases

Class representing case (instance) of process

- Extends :: HalResource

Config

//TODO doplniť čo všetko môže byť v configu

Methods

- constructor - host Tab, panel to render, case resource from backend, links, angular dependencies, config object

load - load case data (http request)

- open - open case's tasks in new Tab
 - delete - delete whole forever (http request)
-

Action Cases

Class representing special case type with slightly different behaviour

- Extends :: Case

Methods

- constructor - host Tab, host panel group to expansion panels, case resource, angular dependencies, config object
- loadData - load all case's data to expansion panel
- loadTasks - load all tasks that are available for this case
- click
- preventDefault
- expand
- panelExpand
- collapse
- openTaskDialog
- updateImmediateData

- removePanel

Case Tab

Class representing tab in case view which handles operations over cases. It is host for cases objects.

- Extends :: Tab

Constants

- URL_SEARCH = "/res/workflow/case/search"
- FIND_BY_AUTHOR = 0
- FIND_BY_PETRINET = 1
- FIND_BY_TRANSITION = 2

Methods

- constructor - label of Tab, controller, angular dependencies, config object
- activate
- buildSearchRequest
- load
- parseCase
- openCase
- closeCase
- openNew CaseDialog
- createCase
- loadPetriNets
- loadPetriNet
- loadTransitions
- delete

DataField

Class representing data field object of a process

- Extends :: HalResource

Methods

- constructor - parent task, resource of data field, links, angular dependencies
- format
- isValid
- parse
- save
- chooseUser
- fileChanged
- upload
- download
- bindElement

Static Methods

- padding
 - roundToTwo
-

HalResource

Class to represent resource recieved from backend server in HAL format.

Methods

- constructor - links
 - link
-

Tab

Class representing object of Tab in UI of web page.

Methods

- constructor - id of tab in tabs array, label to show in UI
 - activate
-

Task

Class representing task object created by backend server and represents enabled transition from process.

- Extends :: HalResource

Config

//TODO

Methods

- constructor - host tab, panel as UI element, resource from server, links, angular dependencies, config object
- status
- assign
- delegate
- cancel
- doFinish
- finish
- getData
- load
- sortData
- validateRequiredData
- save
- updateData
- focusNearestRequiredField
- changeResource
- click
- preventDefault
- expand
- panelExpand
- collapse
- panelCollapse
- show DataGroupDivider

- getIcons

Static Methods

- formatDate
-

TaskTab

Class representing tab in task view which handles operations over tasks. It is host for tasks objects.

- Extends :: Tab

Constants

- URL_ALL = "/res/task"
- URL_MY = "/res/task/my"
- URL_SEARCH = "/res/task/search"
- URL_BYCASE = "/res/task/case"
- FIND_BY_CASE = 0
- FIND_BY_TITLE = 1

Methods

- constructor - id of tab in tabs array, label of tab in UI, baseUrl to send request to, baseCriteria to apply search, useCase from which task are from, angular dependencies, config object
- activate
- reload
- buildRequestConfig
- load
- getSearchQuery
- parseTasks
- deleteTaskOnIndex
- prioritySort
- autoExpandTask
- updateTasksData
- loadTransactions

- mostForwardTransaction
 - addTaskController
 - removeAll
 - expandTask
 - reloadUseCase
-

Transaction

Class to represent group of transitions names as transaction.

Methods

- constructor - resource sent from server, angular dependencies
 - setActives
-

Services

Auth

Service to handle authentication to authentication server.

Constants

- loginPath: "/login"
- userPath: "user"
- logoutPath: "/logout"
- signupPath: "/signup"
- appPath: "/"

Methods

- authenticate
- logout
- signup
- init

- isExcluded

AuthHttpInterceptor
